Now let's discuss the power amp section schematic. It is a pretty standard design for a 100 watt power section, but take note of a few things. First, you can see the rest of the DC heater circuit in the top left of the schematic. You can also see that the amp has a Post Phase Inverter Master Volume (PPIMV) implemented.

The Marshall Plexi guitar amplifier was an evolution of their very successful Fender 5F6-A Bassman copy, the JTM45 but with just two preamp gain stages it can't really be considered a "high gain" amplifier. The Plexi's topology is still very similar to the Fender 5F6-A Bassman. The guitar signal enters at left at the I "Bright" Channel input jack.

Send me an email with MARshall Mode4 MF350 as the subject line and ask for the drawings. By the way, the amp is a MF350, Mode4 is just a series like JCM2000 is. You might find the schematic more easily looking for MF350. My dealer page doesn't recognize Mode4 even, but it knows MF350. If it is blown up, there are four of the power modules.
