The Media Equation is a general communication theory that claims that people tend to treat computers and other media as if they were either real people or real places. The effects of this phenomenon on people experiencing these media are often profound, leading them to behave and to respond to these experiences in unexpected ways, most of which they are completely unaware of. Originally based on the research of Clifford Nass and Byron Reeves at Stanford University, the theory explains that peopl

The Media Equation - Wikipedia

The media equation, as introduced by Nass and Reeves, is that "media equals real life" and that our interactions with media are "fundamentally social and natural" (p. 5). This book is a popularization of established, replicated research on how people interact with television advertising, tutoring systems, error messages, loud noises, sudden movement, etc.
